28 PLAINTIFF'S MOTION TO REACTIVATE CASE AND
1 FOR LEAVE TO FILE SECOND AMENDED COMPLAINT
2 (Case No. C91-427R)

MOTION

Plaintiffs Northwest Environmental Advocates (NWEA)¹ and Northwest Environmental Defense Center (NEDC) hereby move the Court for an order re-opening and reactivating this civil action, which has been dormant since shortly after the entry of a consent decree on January 20, 1998. Further, Plaintiffs seek leave to file the accompanying proposed Second Amended Complaint, which adds one new claim and removes several others included in the First Amended Complaint.² See Dkt. #67, filed Nov. 23, 1994. The grounds for the motion are set forth below.

MEMORANDUM

A. Introduction and Background of the Litigation

This suit reflects NWEA’s long-standing and still ongoing effort to compel the Environmental Protection Agency (“EPA”), acting though its Administrator and the Regional Administrator for Region 10, to comply with its obligations under the Clean Water Act (“CWA” or “Act”) to ensure that, for every surface water in the State of Washington with excess pollution, there is a timely and effective clean-up plan sufficient to implement the state’s water quality standards. *See generally* 33 U.S.C. § 1313(d)(2). These clean-up plans, known as total maximum daily loads or “TMDLs” in Clean Water Act parlance, are essential to achieving the Act’s goals because they establish

the maximum amount of pollutants a water quality limited segment can receive

¹ Plaintiff Northwest Environmental Defense Center (NEDC) joins this motion and supports NWEA's litigation efforts as described herein, but intends to seek a stipulation of its dismissal from this action pursuant to Fed. R. Civ. P. 41(a)(1)(A)(ii) once the case becomes active again.

² As required by Local Civil Rule 15, NWEA's proposed Second Amended Complaint is filed herewith as Exhibit 1.

1 daily without violating the state's water quality standards. TMDLs are supposed to
 2 be developed in accordance with their priority ranking on the 303(d) list.

3 *Sierra Club v. McLellan*, No. 11-CV-1759-BJR, 2015 WL 1188522, at *1 (W.D. Wash. Mar. 16,
 4 2015). As this Court has noted, when it comes to TMDLs “the CWA does not give the EPA
 5 authority to approve an indefinite delay;” to the contrary, the Act “commands the EPA to ensure
 6 prompt compliance” with the Act. *Id.* at *10 (citing *Scott v. City of Hammond*, 741 F.2d 992, 998
 7 (7th Cir. 1984) and *Idaho Sportsmen’s Coalition v. Browner*, 951 F. Supp. 962, 967 (W.D.
 8 Wash. 1996)). In the intervening years since this case was filed, EPA has ignored that statutory
 9 command, compelling NWEA to revive this action.

10 The objectives NWEA seeks to achieve through its proposed Second Amended
 11 Complaint and reactivation of this litigation are similar to those ordered by this Court in
 12 *McLellan* with respect to the Spokane River—including “a definite schedule with concrete
 13 goals” and “a reasonable end date” for the completion of TMDLs, *see* 2015 WL 1188522 at
 14 *11—only here, NWEA focuses on all of those waters still impaired since at least the time EPA
 15 approved Washington’s 1996 303(d) list. The State has unambiguously abandoned its effort to
 16 develop TMDLs for those long-polluted waters, and intervention by EPA is mandatory in the
 17 face of this programmatic failure.

18 **1. Early Litigation and Partial Settlement: 1991-1998**

19 Plaintiffs filed their initial complaint in this case more than 25 years ago, in March 1991.
 20 Dkt. #1, Compl. A consent decree was entered by the Court on October 13, 1992, *see* Dkt. #58,
 21 but was vacated almost two years later. Dkt. #61. Litigation recommenced when Plaintiffs’ First
 22 Amended Complaint was filed November 23, 1994. Dkt. #67.

23 In January 1998, following several years of negotiations, the parties partially settled
 24 Plaintiffs’ claims via a consent decree and a related settlement agreement that called for, *inter*
 25 PLAINTIFF’S MOTION TO REACTIVATE CASE AND
 26 FOR LEAVE TO FILE SECOND AMENDED COMPLAINT
 27 (Case No. C91-427R)

1 *alia*, a 15-year schedule to complete all TMDLs needed at that time. The consent decree, entered
 2 by the Court on January 20, 1998, *see* Dkt. #106 (“1998 Consent Decree”), required EPA to
 3 “take all steps necessary to ensure that thirty-eight (38) TMDLs are completed for waters listed
 4 pursuant to CWA Section 303(d) within five (5) years” of its date of entry. 1998 Consent Decree
 5 at ¶ 5.³ That Consent Decree further provided that upon completion of EPA’s obligations under
 6 it, Counts 7 and 8 of the complaint “shall be dismissed with prejudice” and that the parties would
 7 “file the appropriate notice with the Court so that the Court may issue the appropriate order of
 8 dismissal.” *Id.* at ¶ 11. Such notice was never filed, however, and dismissal of those counts never
 9 occurred.

10
 11 Concurrently with the 1998 Consent Decree, Plaintiffs and EPA entered a separate
 12 settlement agreement intended to “set forth terms for . . . establishment of TMDLs for the waters
 13 on [Washington’s] 1996 Section 303(d) list that are not addressed in the Consent Decree.”
 14 Settlement Agreement (January 6, 1998) at 2, ¶ G.⁴ The central element of that Settlement
 15 Agreement was a 15-year schedule for the completion of TMDLs for all waters included on the
 16 State’s 1996 Section 303(d) list—1,566 TMDLs in total—by June 30, 2013. Settlement
 17 Agreement, Attachment A (hereinafter, “1998 TMDL Schedule”). While Plaintiffs and EPA
 18 understood that Washington would have primary responsibility for developing those TMDLs,
 19 they expressly recognized EPA’s critical oversight role in the TMDL process, including its
 20 essential function as a “backstop” against the State’s potential delay. To that end, the Settlement
 21 Agreement also provided as follows:

22
 23 EPA also commits that it will take all steps necessary to ensure that TMDLs for all
 24

25
 26
 27 ³ NWEA does not allege that EPA has violated the 1998 Consent Decree.

28 ⁴ The fully executed 1998 Settlement Agreement is attached hereto as Exhibit 2.

1 WQLSs on the 1996 Section 303(d) list are completed by June 30, 2013, consistent with
 2 Paragraph 5 above, through establishment of TMDLs or approval of the TMDLs
 3 submitted by the State.

4 Settlement Agreement at 8, ¶ 6.⁵ EPA also made several commitments to allow NWEA and
 5 others to “assess EPA’s satisfaction of its commitments” regarding TMDL development in
 6 Washington; the Settlement Agreement requires EPA to submit a progress report to NWEA
 7 every two years identifying

8 (a) the TMDLs submitted by the State during the two-year period, the date of each
 9 submission, EPA action taken on each submission and the date of the action
 10 taken;
 11 (b) the TMDLs that EPA has established during the two-year reporting period;
 12 (c) all WQLSs that are on the 1996 Section 303(d) list that are not included on
 13 subsequent Section 303 (d) lists because other pollution controls are stringent
 14 enough to implement applicable water quality standards[.]

15 Settlement Agreement at 9-10, ¶ 9. The Settlement Agreement remains in effect today; it
 16 terminates only “[u]pon fulfillment of EPA’s obligations under” it, and the parties agreed to file
 17 a joint motion to dismiss NWEA’s remaining claims upon its termination. *Id.* at 10, ¶ 11. No
 18 such joint motion was filed, and as discussed further below, EPA has failed to fulfil its
 19 obligations under the Settlement Agreement.

20 The dispute resolution provision of the Settlement Agreement requires the dissatisfied
 21 party to “provide the other party with written notice of the dispute and a request for
 22 negotiations.” Settlement Agreement at 11, ¶ 15. It then requires the parties to meet and confer
 23 regarding the dispute within 30 days of the written notice, and provides that if a resolution is not

24
 25 ⁵ WQLS stands for “water quality limited segment”, which is defined to mean a “segment
 26 where it is known that water quality does not meet applicable water quality standards, and/or is
 27 not expected to meet applicable water quality standards, even after the application of the
 28 technology-based effluent limitations required by sections 301(b) and 306 of the Act.” 40 C.F.R.
 § 130.2(j). These are the segments of surface waters that make up the 303(d) list for which
 TMDLs are needed.

1 reached within 60 days of that meeting, “NWEA’s sole remedy is to reactivate the litigation” in
 2 this case. *Id.*

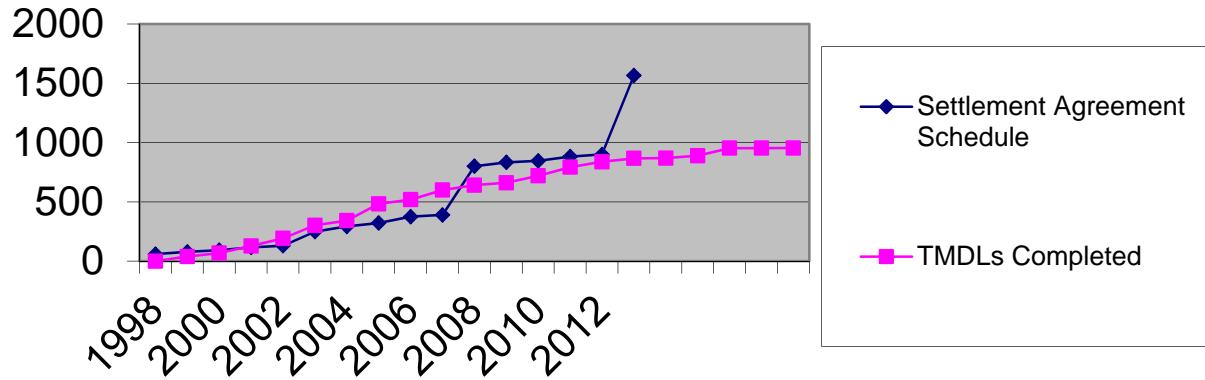

3 **2. Post-Settlement TMDL Development in Washington: 1998-2019**

4 During the first several years following the Settlement Agreement, Washington generally
 5 kept pace with the 1998 TMDL Schedule it had agreed to with NWEA and EPA. But by 2008
 6 the State had fallen significantly behind, missing the Settlement Agreement’s interim deadline to
 7 complete 801 TMDLs by June 30, 2008. EPA, in turn, missed its own interim deadline to “take
 8 all steps necessary to ensure completion of the requisite number of TMDLs” within two years of
 9 that interim deadline—i.e., by June 30, 2010. Settlement Agreement at 8, ¶ 6.

10
 11 By the end of the 1998 TMDL Schedule (June 30, 2013), Washington had completed
 12 only 867 TMDLs—about 700 short of the 1,566 TMDLs it had agreed to complete by that date.
 13 According to EPA records, Washington completed TMDLs at a rate of about 48 per year during
 14 the term of the Settlement Agreement’s TMDL schedule (FY 1998-2013). Since the end of that
 15 schedule in July 2013, however, the State essentially abandoned its TMDL program, and has
 16 completed **only one TMDL** during the past three fiscal years (2017-2019).
 17
 18

19 The graph below is taken from EPA records; it shows Washington’s TMDL progress
 20 during the term of the Settlement Agreement TMDL schedule and through the present day:
 21
 22
 23
 24
 25
 26
 27
 28

1 Washington TMDLs and Settlement 2 Agreement Schedule (cumulative)

Moreover, Washington has—presumably with EPA’s approval—prepared TMDLs for a number of WQLS first added to its Section 303(d) list *after* 1996, while ignoring or abandoning many WQLS listed in 1996 or earlier. While the Settlement Agreement allows the State and/or EPA to “substitute one or more such future-listed waters for one or more waters on the 1996 303(d) list” and to count such TMDLs for purposes of determining whether EPA is meeting its commitments under the Agreement, *see* Settlement Agreement at 8-9, ¶ 7, any substitution under that provision does not affect EPA’s obligation to “take all steps necessary to ensure that TMDLs for all WQLSs on the 1996 Section 303(d) list are completed by June 30, 2013 . . . through establishment of TMDLs or approval of the TMDLs submitted by the State.” Settlement Agreement at ¶ 6.⁶ As a result, there are approximately 545 WQLS that have been on Washington’s § 303(d) list since at least 1996, but which still lack a TMDL.

3. Settlement Agreement Dispute Resolution Process: 2011-19

⁶ Further, any substitution of one WQLS for another was allowed only if “the substitution is between waters of comparable TMDL complexity.” Settlement Agreement at ¶ 7.
 PLAINTIFF’S MOTION TO REACTIVATE CASE AND
 FOR LEAVE TO FILE SECOND AMENDED COMPLAINT
 (Case No. C91-427R)

1 After both Washington and EPA had missed their respective interim deadlines for TMDL
 2 completion, NWEA invoked the Agreement's dispute resolution provision in 2011. NWEA
 3 negotiated with both parties in an effort to accelerate Washington's slowing rate of TMDL
 4 development and to secure EPA's continuing obligation to "ensure that TMDLs for all WQLSs
 5 on the 1996 Section 303(d) list are completed" as required by the Settlement Agreement.
 6
 7 Negotiations continued off and on for several years, but the parties were unable to reach an
 8 agreement at that time.

9 On May 15, 2019, NWEA sent to EPA a letter providing its written notice of dispute of
 10 non-compliance with the Settlement Agreement and requesting negotiations with the agency.⁷
 11 Specifically, NWEA asserted in that letter that EPA had failed to comply with its obligation
 12 under the paragraph 6 of the Settlement Agreement to ensure that TMDLs for "all WQLSs on the
 13 [State's] 1996 section 303(d) list are completed by June 30, 2013" and had failed to provide
 14 NWEA with a biannual progress report required by paragraph 9 of the Settlement Agreement
 15 since early 2013.

16 In that same letter, NWEA notified Defendants of its intent to file suit against EPA, the
 17 EPA Administrator, and the Regional Administrator for EPA Region 10 pursuant to the CWA's
 18 citizen suit provision, 33 U.S.C. § 1365(a)(2), regarding their failure to fulfill their mandatory
 19 duties under section 303(d)(2) to review and either approve or disapprove, within 30 days of
 20 submission, a number of TMDLs that Washington has "constructively submitted" to EPA. Citing
 21 case law from both the Ninth Circuit and this Court on the "constructive submission" doctrine,
 22 NWEA alleged in that notice letter, and alleges in the accompanying proposed Second Amended
 23 Complaint, that

24 ⁷ A copy of NWEA's May 15, 2019 letter to EPA is attached hereto as Exhibit 3.

1 Washington has constructively submitted to EPA a TMDL for each and every
 2 WQLS that has been on the State's 303(d) list since 1996 for which no TMDL has
 3 been completed or approved by EPA. Those waters have been impaired for *at*
least 23 years (many of those waters first appear on Washington's 303(d) lists
 4 prior to 1996), and yet Washington has no plan, and no schedule in place, for the
 5 development of TMDLs for such waters. With respect to each and every such
 6 constructively submitted TMDL, EPA has failed to complete its mandatory duty
 7 under Section 303(d)(2) to "either approve or disapprove" the TMDL. 33 U.S.C. §
 8 1313(d)(2).

9 Notice Letter at 4-5 (citing *San Francisco BayKeeper v. Whitman*, 297 F.3d 877, 883 (9th Cir.
 10 2002). NWEA and Defendants, through their respective counsel, conferred on June 18, 2019;
 11 July 9, 2019; and August 20, 2019, but were unable to reach a resolution of NWEA's dispute.
 12 Under the Settlement Agreement, therefore, NWEA's sole course of action is to "reactivate the
 13 litigation" in this case. EPA expressly agreed to that remedy in the Settlement Agreement,
 14 though preserved all defenses to NWEA's claims. Settlement Agreement at 11, ¶ 15.

15 Both the State of Washington and EPA have missed multiple deadlines contained in the
 16 1998 Settlement Agreement and TMDL Schedule for the completion of TMDLs for all WQLS in
 17 the State; have completely ignored the approximately 545 WQLS that remain impaired although
 18 they were included on Washington's 1996 § 303(d) list more than two decades ago; have in
 19 recent years produced a smattering of TMDLs at what can only be described as a glacial pace;
 20 and currently have no plan, no schedule, and no firm commitment to complete the remaining
 21 TMDLs at any time in the future.

22 "Section 303(d) expressly requires the EPA to step into the states' shoes if their TMDL
 23 submissions . . . are inadequate[,]" *Alaska Ctr. for the Envt. v. Reilly*, 762 F. Supp. 1422, 1429
 24 (W.D. Wash. 1991), and nothing in the Act "could justify so glacial a pace" as demonstrated here
 25 by Washington and EPA. *Idaho Sportmen's Coalition*, 951 F. Supp. at 967. This Court's
 26 intervention is thus necessary to get Washington's derelict TMDL program back into compliance
 27

1 with the Clean Water Act.

2 **B. The Clean Water Act: Impaired Waters and Total Maximum Daily Loads**

3 Under section 303(d) of the Clean Water Act, the states are required to identify all waters
 4 within their borders that fail to meet applicable water quality standards. 33 U.S.C. §
 5 1313(d)(1)(A). Those waters are typically described as “impaired,” and the list of impaired
 6 waters is colloquially called a “303(d) list.”

7 For each impaired water on a state’s 303(d) list, the Act requires the states to develop and
 8 submit to EPA a TMDL that is

9 established at a level necessary to implement the applicable water quality standards with
 10 seasonal variations and a margin of safety that takes into account any lack of knowledge
 11 concerning the relationship between effluent limitations and water quality.

12 33 U.S.C. § 1313(d)(1)(C). TMDLs must be established for each pollutant “preventing or
 13 expected to prevent attainment of water quality standards” established by the State. 40 C.F.R. §
 14 130.7(c)(1)(ii).

15 Every two years, each state is required to submit a revised 303(d) list, along with “the
 16 loads established” under Section 303(d)(1)(C), to EPA for review and approval. 33 U.S.C. §
 17 1313(d)(2). States must include in their submission “a priority ranking for all listed water
 18 quality-limited segments still requiring TMDLs, taking into account the severity of the pollution
 19 and the uses to be made of such waters and shall identify the pollutants causing or expected to
 20 cause violations of the applicable water quality standards.” 40 C.F.R. § 130.7(b)(4).

21 While TMDL creation is thus left primarily to the states, EPA’s supervision and, where
 22 warranted, active participation is critical to the success of the TMDL program. The EPA
 23 Regional Administrator may only approve a state’s 303(d) list, individual TMDLs, TMDL
 24 priority ranking, and TMDL schedule if they meet all of the requirements of section 303 of the
 25

1 CWA and EPA's implementing regulations. 40 C.F.R. § 130.7(d)(2). Lists and loadings
 2 approved by EPA become part of the state's water quality management plan, but

3 [i]f the Regional Administrator disapproves such listing and loadings, he shall,
 4 not later than 30 days after the date of such disapproval, identify such waters in
 5 such State and establish such loads for such waters as determined necessary to
 implement applicable WQS.

6 40 C.F.R. § 130.7(d)(2). Thus, where a state fails to submit an approvable TMDL on the timeline
 7 required by the CWA, EPA has a mandatory duty to step in—including, for example, to establish
 8 the necessary TMDLs itself. 33 U.S.C. § 303(d)(2).

9

10 **C. The Court Should Grant NWEA's Motion to Reactivate this Litigation and Permit
 11 NWEA to File its Second Amended Complaint**

12 In this case, NWEA seeks to reactivate the underlying litigation because the parties
 13 agreed long ago that reactivation is the sole remedy in the event of a breach of the 1998
 14 Settlement Agreement. *See* Settlement Agreement at 11, ¶ 15. In executing that Settlement
 15 Agreement, EPA expressly agreed to reactivation and has waived any argument that reactivation
 16 is improper.

17 NWEA also moves the Court, pursuant to Federal Rule of Civil Procedure 15(a)(2), for
 18 leave to file its proposed Second Amended Complaint. Leave to amend should be freely given
 19 “when justice so requires,” *id.*, and the Ninth Circuit has recognized a “strong policy permitting
 20 amendment.” *Bowles v. Reade*, 198 F.3d 752, 757 (9th Cir. 1999). As the Ninth Circuit explained
 21 in *Bowles*, amendment should be generally allowed absent a “specific finding of prejudice to the
 22 opposing party, bad faith by the moving party, or futility of the amendment.” *Id.* at 758. Among
 23 those considerations, undue prejudice is the main factor; thus, “absent prejudice, or a strong
 24 showing” on any of the other factors, “there exists a *presumption* under Rule 15(a) in favor of
 25 granting leave to amend.” *Agne v. Papa John's Int'l, Inc.*, No. C10-1139-JCC, 2011 WL
 26 8

1 13127653, at *1 (W.D. Wash. Nov. 3, 2011) (emphasis in original). Because of the Ninth
 2 Circuit’s “established practice of permitting amendments with ‘extreme liberality’ in order to
 3 further the policy of reaching merit-based decisions . . . the nonmoving party generally bears the
 4 burden of showing why leave to amend should be denied.” *Puget Soundkeeper All. v. APM*
 5 *Terminals Tacoma LLC*, No. C17-5016 BHS, 2017 WL 5668054, at *1 (W.D. Wash. Nov. 27,
 6 2017) (internal quotations omitted).

8 Here, none of the elements counseling against amendment are present. First, despite the
 9 fact that that the underlying litigation has been dormant for over 20 years, there will be no
 10 prejudice to EPA from its reactivation. NWEA seeks to revive two of its original claims—
 11 Claims 9 and 10, each based upon EPA’s failure to establish a reasonable TMDL schedule for all
 12 impaired waters in the State of Washington—and while the factual predicate for those renewed
 13 claims extends forward in time to the present day, the nature of EPA’s failure to properly
 14 implement the TMDL program in Washington is the same now as it was in 1991. NWEA’s
 15 proposed amendment abandons NWEA’s remaining claims, each of which pertain to specific
 16 section 303(d) lists, TMDLs, or other EPA actions or inactions occurring between 1990-1994.
 17 NWEA agrees those particular claims are no longer viable, given the passage of time.
 18 Furthermore, NWEA seeks to add an additional claim, also related to Washington’s deficient
 19 TMDL program but based upon a “constructive submission” theory, the factual basis for which,
 20 NWEA alleges, arose after the expiration of the 1998 TMDL Schedule. There are obviously no
 21 pending deadlines in this case, and NWEA expects a new case management schedule will need
 22 to be established by the parties and the Court, which will eliminate any potential prejudice to
 23 EPA from reactivation of the case.

24 Second, NWEA seeks to amend its complaint in good faith, with no dilatory purpose.
 25

1 NWEA is merely invoking the remedy to which EPA itself agreed in the 1998 Settlement
 2 Agreement, which was triggered by EPA's failure to ensure that TMDLs for all of the WQLS on
 3 Washington's 1996 303(d) list were completed by June 30, 2012. NWEA properly engaged the
 4 Settlement Agreement's dispute resolution provision, negotiated in good faith with EPA on
 5 multiple occasions during 2012-14 and again in 2019, seeking to avoid litigation, but an
 6 agreement could not be reached.

8 Finally, NWEA's proposed amended complaint is not futile. That amended complaint
 9 contains three viable claims: two CWA citizen suit claims, and one APA claim, each of which
 10 challenges EPA's implicit approval of Washington's "indefinite delay" in completing its TMDLs
 11 and each of which is intended to compel "EPA to ensure prompt compliance with the CWA"
 12 within the State. *McLerran*, 2015 WL 1188522 at *10.

14 Because the interests of justice are furthered by the filing of NWEA's proposed Second
 15 Amended Complaint, and because there is no prejudice, undue delay, or futility in NWEA's
 16 amendment, NWEA's motion should be granted.

18
 19 **CONCLUSION**

20 For the foregoing reasons, the Court should grant NWEA's motion to re-open and
 21 reactivate this litigation and grant it leave to file the accompanying Second Amended Complaint.
